

The shop is built. Here's what's next.

A quick status on your online gift shop — what's ready to look at today, and the handful of things we need from you to take it from a demo to a live store that takes real orders.

Prepared by Jude Bartlett For the USP team Date July 15, 2026

WHERE THINGS STAND

The storefront is designed and working end to end

You can click through the whole thing today — it's built faithfully to your brand book: Etica Mono, Union Stage Yellow, the per-venue accent colours, and the playful voice.

What's already working:

- Browse and filter by category, with product pages for sizes and quantity
- Add to cart, a full checkout, and an order-confirmation screen
- The "Sold Out" and "Last Call" stamps, newsletter band, and venue footer

Everything you see is a **demo**. The products, prices and photos are placeholders so we could show the design — none of it is real inventory yet, and no payments are processed.

View the live demo usp-store-coral.vercel.app

A few things from your side turn the demo into a real store

Grouped by priority. The first one is the big one — nothing else can move without it, so it's the best place to start.

Products & photography

START HERE

This is the heart of the store — the products, their details, and the photos that sell them.

- ☐ **The product list** — for each item: name, a short description, and price.
- ☐ **Options** — available sizes (S–3XL) and colours.
Drives the size picker on each product.
- ☐ **Stock counts** — how many of each you have.
This is what powers the "Sold Out" / "Last Call" tags automatically.
- ☐ **Real product photos** — ideally a clean flat-lay plus an on-model shot per item.
Your brand leans candid and inclusive, so on-model shots are perfect.
- ☐ **Categories** — which group each item belongs to (T-Shirts, Hoodies, Hats, Accessories, Posters, Stickers).

Your Shopify store

NEEDED TO SELL

Shopify handles the real money — payments, shipping and taxes — so this lives in your account, under your control. We connect our storefront to it.

- ☐ **A Shopify account** — any paid plan works.
 - ☐ **Payments turned on** — Shopify Payments or your preferred processor.
 - ☐ **Shipping & tax settings** — rates for where you ship, and tax setup.
 - ☐ **Policies** — shipping, returns, and privacy. Short is fine to start.
 - ☐ **The web address you want** — e.g. shop.unionstagepresents.com.
-

Once that exists, you generate **one access key** in Shopify and hand it to me — I do the wiring from there.

Brand & content bits

WHEN YOU CAN

Smaller pieces that round out the site. None of these block launch, but they make it feel finished.

- ☐ **Your logo as a vector (SVG) file.**
Lets it recolour cleanly per venue; the current one is a flat image.
- ☐ **Copy for the Shipping / Returns / Contact pages** — or just a contact email to start.
- ☐ **Your email tool** (Mailchimp, Klaviyo, etc.) so the newsletter signup connects.

ONE DECISION FOR YOU

How hands-on do you want to be?

There are two ways to run this. It mostly comes down to where the site itself lives — you'll manage products and inventory in Shopify either way.

RECOMMENDED

Keep this exact design

The storefront you're looking at stays as-is and pulls products & checkout from your Shopify. Maximum control over the look — it stays true to the brand book.

ALTERNATIVE

Rebuild inside Shopify

Everything lives in Shopify's own theme system — fully self-contained in one place, with a little less design flexibility than the custom build.

We'd recommend the first — it keeps the design we just built. Happy to walk through the trade-offs on a quick call.

WHAT HAPPENS NEXT

The path to launch

- 1 You review the demo and send the pieces above.**
Start with products and photos — that's what everything else waits on.
- 2 We set up the Shopify side together and connect the storefront.**
You own the account; I handle the technical wiring.
- 3 We test the full buying flow in Shopify's safe test mode.**
No real charges — we confirm every step works against your real catalog.
- 4 Connect your domain, final checks, and go live.**
Announced through the newsletter band already built into the site.

We can move as fast as the product info and photos arrive — that's the one thing on the critical path.

Questions on any of this, or want to walk through it on a call?
